

# How to work safely in care homes

## Taking off personal protective equipment (PPE)

- PPE should be removed in an order that minimises the risk of self-contamination
- Gloves, aprons (and eye protection if used) should be taken off in the resident's room or cohort area
- This is the type of PPE is needed when providing personal care which requires you to be in direct contact with the resident(s) (e.g. touching) or within 2 metres of a resident who is coughing

**1** Remove gloves. Grasp the outside of glove with the opposite gloved hand; peel off.  
Hold the removed glove in the remaining gloved hand.

Slide the fingers of the un-gloved hand under the remaining glove at the wrist.

Peel the remaining glove off over the first glove and discard.

**2** Clean hands.

**3** Apron.  
Unfasten or break apron ties at the neck and let the apron fold down on itself.

Break ties at waist and fold apron in on itself – do not touch the outside – **this will be contaminated.** Discard.

**4** Remove eye protection if worn due to risk of splashing.  
Use both hands to handle the straps by pulling away from face and discard or disinfect before using again.

**5** Clean hands.

**6** Remove your facemask once your your care task is completed and before you take a break, eat a snack or change activities. Untie or break bottom ties, followed by top ties or elastic, and remove by handling the ties only because the front of the face mask may be contaminated. Lean forward slightly. Discard. **DO NOT** reuse once removed.

**7** Clean hands with soap and water.
